

Program Goals

Tools for Success Math Operations provide teachers and students with:

- an easy to use 15-20 minute daily routine of instruction and practice that introduces and practices math operations in a carefully designed sequence in each of three operations: addition, subtraction, and multiplication.
- a daily lesson with a teacher model and guided practice of how to solve a problem accurately and efficiently.
- daily independent practice of problems that allow the student to achieve mastery.
- extra practice and review of previous operations to maintain skill level.
- a chart for tracking individual progress that motivates students to be successful learners.
- an end of module test to demonstrate mastery.
